TOMBO No.

**1891** series

Kammprofile gasket

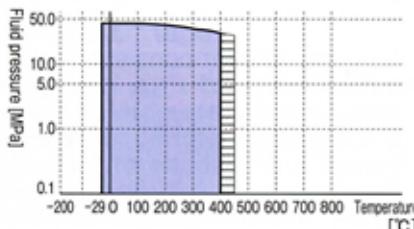

\* This photograph shows the gasket with part of the surface layer removed.

- Can be used even under severe conditions encountered in a heat cycle, and exhibits excellent sealing performance even when a small tightening force is used.
- There is no need for an inner ring to stop buckling. This enables this gasket to be designed with a narrow width.
- There is no need to worry about the gasket breaking up even in the case of a large bore gasket.
- Suitable for use in heat exchangers and pressure vessels.

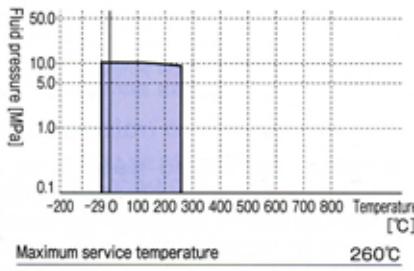

Water-type, oil-type, gas-type or corrosive fluids

TOMBO No.1891-GR

Water-type, oil-type, gas-type or corrosive fluids

TOMBO No.1891-TF

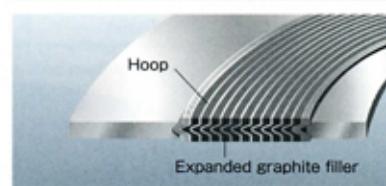

\* When using TOMBO No.1891 at Class 400 or higher, use an interlocking type (M&F) or a grooved type (T&G) flange.

For details of a kammprofile gasket, see P.35 and P.36.

TOMBO No.

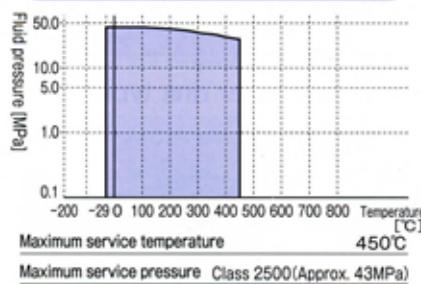

**1834R-GR** series

GRASEAL™ Vortex™ gasket

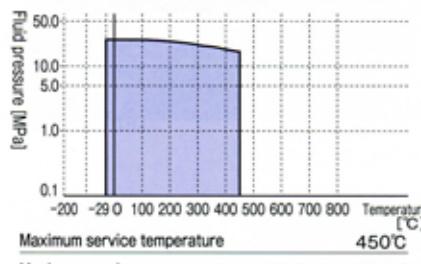

- Exhibits excellent sealing performance even under at severe conditions such as high temperature and high pressure, extremely low temperatures, or heat cycles.
- It is suitable for a variety of applications in pipes, equipment, and so on.

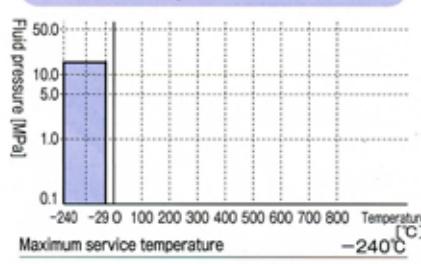

Water-type fluid

Oil-type, gas-type or corrosive fluids

Low temperature fluids

Spiral wound gasket

TOMBO No.

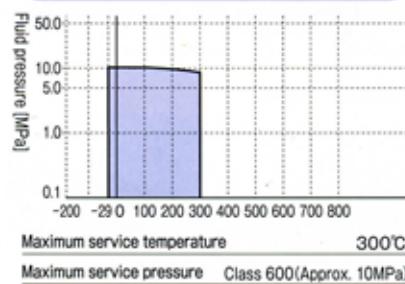

**9090-IOR** series

NAFLON™ Vortex™ gasket

- Can be used with corrosive fluids and pure oxygen gas, in vacuum lines that require airtightness.
- Can be used in pipes, pressure vessels, heat exchangers, valve bonnets, and so on.

Water-type, oil-type, gas-type or corrosive fluids

Low temperature fluids
